

iBAS+ + Admin Task Manual — Module 2: Geography

Module 2 — Geography

Menu: Administration → **Geography**

Process 2.1 — Build the national location tree

Start: No divisions (or incomplete tree).

End: All divisions, districts, and thanas your users need are in the system.

1. Open **Geography**.
2. Add every **division** you need (one form submit per division).
3. For the first division, add all its **districts**.
4. For each district, add all its **thanas**.
5. Repeat steps 3–4 for every remaining division.
6. Scan the tree on screen — every district sits under a division, every thana under a district.
7. Done when the tree matches your official geography list.

Process 2.2 — Fix a wrong location name or code

Start: A division, district, or thana already exists but is wrong.

End: Record updated in the tree.

1. Open **Geography**.
2. Find the row in the tree.
3. Click **Edit** on that row.
4. Change the details and save.
5. Confirm the tree shows the correction.

Process 2.3 — Remove a location entry

Start: A location was added by mistake.

End: Entry removed from tree.

1. Open **Geography**.
2. Find the row.

3. Click **Delete** and confirm.
 4. If delete is blocked (children exist), delete or move children first, or use **Process 2.2** to correct instead.
