

iBAS+ + Admin Task Manual — Module 8: Syllabus

Module 8 — Syllabus

Menu: Exam programs → exam → subject → **Syllabus**

(or from Exam setup → **Create & open syllabus**)

Process 8.1 — Build syllabus for one exam subject

Start: Subject exists; syllabus empty.

End: Full syllabus with groups, topics, and book references.

1. Open the subject's **Syllabus** page.
2. Create **Syllabus group 1** (major section of the syllabus).
3. Under that group, create each **topic**.
4. Under each topic, create **sub-topics** if the syllabus splits finer.
5. For each topic (or sub-topic), add **references** to book chapters, rules, or regulations (**Module 4 / 5** must be done first).
6. Repeat steps 2–5 for all syllabus groups until the subject is fully mapped.
7. Review the page — marks and references should cover the official syllabus document.

Process 8.2 — Align syllabus after book content changes

Start: GFR/book updated; syllabus references outdated.

End: References point to current rules.

1. Open the subject **Syllabus**.
2. Find topics with old references.
3. Edit or delete the reference → add new reference to the updated chapter/rule/regulation.
4. Save each change.
