

iBAS+ + Admin Task Manual — Module 10: Workflow (Guided processes)

Module 10 — Workflow (Guided processes)

Menu: Workflow admin → **Workflow admin**

Process 10.1 — Define a new office process

Start: No task for this business process.

End: Published task appears in process catalog.

1. Open **Workflow admin**.
2. Create a new **task** — name, code, and linked office module (e.g. BILL).
3. Add **Step 1** — title, which role acts (SDO, DDO, ...), and fields officers must fill.
4. Add **Step 2, Step 3**, ... in order until the process matches the official workflow.
5. Review the flow preview on screen.
6. **Publish** the task (requires at least one step).
7. Confirm it appears under **Workflow admin** → **Tasks** and **Guided processes** → **Process catalog**.

Process 10.2 — Roll out a process to officers

Start: Task is published; no one can act yet.

End: Officers receive inbox items when runs reach their step.

1. Complete **Process 3.3** for each officer — WORKFLOW access + correct workflow role.
2. Ask one officer to open **Process catalog** → start a **test run**.
3. First officer completes Step 1 → submit.
4. Next officer (next role) checks **Action inbox** → completes Step 2.
5. Repeat through all steps on the test run.
6. Fix task steps in **Workflow admin** if handoffs fail.
7. Go live — real users start runs from **Process catalog**.

Process 10.3 — Change a live process

Start: Published task needs new step or field.

End: Updated definition (note: in-flight runs may use old steps — coordinate with admins).

1. Open **Workflow admin** → select the task.
 2. Edit task metadata or add/edit/delete steps.
 3. Re-publish if the UI requires it after structural changes.
 4. Communicate to officers; finish open runs or start new runs as policy dictates.
